1. Introduction

About the Project	The vision of the Assam Project on Forest and Biodiversity Conservation (APFBC) is 'to enable sustainable forest and biodiversity conservation and management in Assam through multi-scale integrative planning and involvement of forest dependent communities in target areas and giving fillip to their livelihood activities through sustainable use of forest and non-forest resources'. The project's objective has been stated as: 'In collaboration with the forest dependent communities, to restore forest eco-systems to enhance the forest dependent community's livelihoods and ensure conservation and sustainable use of biodiversity'. The above project is being mainly funded by the <i>Agence France de Dévelopement</i> (AFD) - i.e. the French Development Agency, with co-funding from the Government of Assam. The Assam Project on Forest and Biodiversity Conservation Society (APFBC Society) has the mandate for planning, implementation, monitoring, coordination and management of all the activities under the above mentioned project.
Micro-Planning & Livelihood Development	In order to promote livelihood activities through market potential based value addition; the present project intends to take up activities like entrepreneurship promotion, product processing value addition and marketing under this project. This has become necessary on account of the pressures on existing forest resources due to the growth of population. There is a need to explore value addition to the existing forest and biodiversity products and services, based on the market potential. In addition, non-forest based livelihoods need to be explored and the capacities of the community members need to be built-up through skills development initiatives. A consortium comprising of Indian Institute of Entrepreneurship (IIE) Guwahati, <i>Rashtriya Gramin Vikas Nidhi</i> (RGVN) and Centre for Microfinance and Livelihood (CML) has been formed to implement (<i>inter</i> -alia) the micro-planning and livelihood development under the above project. The above consortium has been titled as 'Consortium for Micro Planning and Enhancing Livelihood Opportunities' - COMPELO in short. As per project guidelines, this micro-plan includes 'various operations of village and forest development livelihood support of forest dependent members and keeping sustainable forest management as the broad objective'. It includes both forest development and livelihood development.
Micro-Plan for the Kakojan JFMC	This document gives the Micro-Plan for the Kakojan JFMC, which is located in the Tinsukia district of Assam.The Kakojan JFMC falls under the jurisdiction of the Doomdooma Forest Range under Doomdooma Forest Division. The present micro-plan has been prepared by members of the community, including both male and female members. This document has emerged as an outcome of a Participatory Rural Appraisal (PRA) process undertaken by the community and personal of Centre for Microfinance and Livelihood (CML) GuwahatiinJune2016.The micro-plan has been compiled by CML based on the project guide lines .The document has been discussed and finalized for adoption in July 2016.

2. Village Socio-Economic profile

Location Key	Naharijan. The JFMC falls u almost 16kms from the Divi Nearest town of the village	inder Duamora sional Forest Off e is Doomdooma se towns are 10 village is Tinsuka ge Map	a and Tinsukia and the distance 6 kms and 40 kms respectively. ia which is 40 kms away.		
Information	Table – A : Key Information	on of the IFMC			
	Name of the JFMC	Kakojan			
	District	Tinsukia			
	Forest Division	Doomdooma			
	Forest Range	Kakopathar			
	Year of Formation	2015-16			
	Forest Area Allotted	30			
	Total Household	158			
	Nos. of JFMC Village	Nahor jan

	Beat Office Name	Kakopathar			
	Additional details are given	at Table-1 of Red			
Brief Details of the Executive Committee & Council Body	contained in the table given below:				
General Body	Table – B : Brief details of Name of President	Executive Com	Jogi urang		
	Name of Secretary		Durgaswar Bharali		
	Name of the Treasurer				
	No. of Members in Execut		11(Male:9, Female:2)		
	No. of Members in the Gen	neral Body	158		
	Source: JFMC Records				

Households & Population Structure	 The JFMC has one village namely Kakojan with a total households of 158 and the total population of 712. The total male population stands at 368 whereas the total female population is 344. Hindu is the dominant religion practiced of the JFMC and residing communities is only Adivasi. Almost 90.50% of the total population belongs to OBC category. The average size of the households is 4.5 and the sex ratio is 934.78 females per 1000 males in the JFMC villages. As per the household survey conducted, 87.34% of the households are BPL whereas 9.49% belong to APL category and the status of the remaining households have not been reported in the field survey conducted. This signifies that the economic condition of majority of the households in the JFMC is not better off. Only 21 households possess Government ration cards. Table-2 of Record-I may be referred for further details in the above regard.
Education & Skill Development	 The literacy rate in the Kakojan JFMC is of 52%. Around 16% of the households from the area is illiterate. Majority of population have studied upto class IV only The female members from the area have weaving as a traditional skill, available with them. The male members from the village have skills like masonry and technical knowledge is prevalent among the youths from the area, which is mainly computer knowledge and literacy. The households are dependent on agriculture for their income. Under agriculture they mostly go for the cultivation of rain fed paddy. Almost all the households have agricultural land and they are engaged in the cultivation of other seasonal crops like mustard, green leafy vegetables, brinjal, cabbage etc. Provision of Education facility up to primary level is satisfactory in the village as there is one primary school, one Anganwadi centre. But, for any education beyond that the children need to travel to the nearest town Chapakhowa. So the activities which has been found out in the area are: Agriculture-paddy and rabi crop cultivation Livestock Rearing

Soil	There are three types of soil available: sandy loam, loam and clayey loam in Kakojan JFMC villages.
	These favour the cultivation of Summer rice (Sali paddy), Rabi crops including mustard, pea, seasonal vegetables, etc.
Water	Ground water is the main source of drinking water. Good quality water is available to the villagers around the year. Almost every household has tube well connections and wells. There are natural small outlets.
Climate: Temperature & Rainfall	Highest temperature is generally observed in the months of July/August (35°C) and lowest is in the months of December/January (7-8°C). Humidity is the morning hour's ranges from 90-95% and 50-70% in the afternoon hours. The climate of the region is sub-tropical wet and is characterized by hot and humid summer and dry cool winter.
	The Kakojan JFMC is experiences 2300 to 3000 mm rainfall per year. Average annual rainfall of the area is 2819 mm. While normal rainfall (1901- 1950) is 2796.4 mm. It is observed that on an average 64 to 68% of annual rainfall is received during the monsoon period (June-September) and 22- 26% of annual rainfall during pre-monsoon period (March-May).
Forest & Bio- diversity	The local forests have been broadly classified as- Tropical Wet Evergreen forest.
	The nearby forest is enriched with various tree species like- Lagerstroemia parviflora (Sida), Delonix resia (Radhasura), Cresiniferum (Dhuna, Dhup), Ficus hispida (Dimoru), Caeslpima pulcherima (Krishnasura), Tetrameles mdiflora (Bheleu) and Tactona srandis (Segun) etc. The forest can yield elephant apples, bamboo, thatch, fodder, medicinal plants.
	Additional information is provided in 'Forest Development Plan'.
Land Use Pattern	Appendix-2 gives the land-use pattern of the village. From the same, it is seen that the land-use in the village is as follows:
	 Firewood plantation -52% Forest degraded -17% Paddy field -8% Pond-2% Road -3% Settlement area -5% Stream-6% Tree Clad area-3% Water body-4%

Land Holdings	 The type of households as per land-holding is given at Table-3 of Record-I. From the same, it is seen that: 62.93% HH (73 HH) have farming lands Large farmer (> 10 ha.) 4.31% (5 HH) Small Farmer (2 – 10 ha.) 15.52% (18 HH) Marginal Farmer (<2 ha.) 43.10% (50 HH) Landless 37.07% (43 HH)
Livestock	The total number of livestock in the village is 654. The main types of livestock possessed by the households include: Cattle 71 Bull 65 Buffaloes 15 Poultry 411 Pigs 55 Goat 37 Table-4 of Record-I may be referred to for the details in the above connection.
Village Infrastructure & Communication Facilities	 In any community; the availability of basic infrastructure enables the development of sustainable livelihood options. The infrastructures which are available in the villages can be categorized into the following heads: Physical Infrastructure: The households have the basic amenities including electricity, mobile phones, cycles and motorbikes for communication purposes. The villages are well connected to the main road which connects them to the town. Education and Health facilities: Education and health facilities include one lower primary school, 2 anganwadi centers, one public health center which is avaiblable with the families. Govt. Offices: The Government offices and line departments which are existing in the area are Panchayat office, Revenue office, local police station, Forest beat office but those all are located in a considerable distance from the villages. Financial Institutions: There are banks and post offices which are present in the area but they are at a considerable distance of at an average distance of 5 km from the villages.

Agricultural	The details of the agricultural crops grown in the village is available at Table- 6 of Record-I.
Crops	0 01 Recold-1.
	• Only 6% of the households from the villages are engaged in Sali paddy cultivation.
	• Proximity to the Doomdooma town and limited farm landholding discourages the farmers from engaging in agriculture and certain traditional fruits like jackfruit, mango, banana and vegetables are grown by the farmers.
	• Few families have also started engaging in the cultivation of small scale tea gardens.
Crop Production Profile	Table-7 of Record-I may be referred to for the production and yield details of the crops grown in the village.
TTOME	The production and yield details of the crops grown in the village are as follows. The crop cultivated by the families is basically rain fed.
Fodder Availability	The matter of fodder availability in the village is dealt with at Table-8of Record-I. The above shows that the main sources of fodder in the village are:
	 Crop residue, Grazing in forest, Household vegetable wastes Green Fodder
Markets	Table - 9 of Record-I shows the location of the different markets from the village. The main markets used by the community and its distance from the JFMC villages are mentioned below:
	 The Grocery/ PDS shops: Nearly 1kmdistancefromvillage The Weekly/ Bi-weekly Market Nearly 3 km away Major Market: Digboi (nearly 4 km away)
Water Resources	 The water resources are tabulated at Table-10 of Record-I. The main water resources with the water availability is as follows: Tube-well: 88 Nos. (Adequate) River: 1 No. (Adequate)- Digboi River Ring well: 5
Energy Consumption	Table-11 of Record-I shows the major sources of energy in the village. The same have been listed below.
	 Firewood: Households Depending: 130 Nos. Source: Local forest area Kerosene: Households Depending: 130 Nos. Source: outside market. LPG: Households Depending: 23 Nos.

Socio-economic status	Social set up- The villages are inhabited by people mostly belonging to the OBC category. The society overall is not marked by deep caste divisions. The observed position of women is satisfactory.
	Economic Conditions - The economic condition of the people in the area is overall satisfactory. The annual income of the household ranges between Rs 20,000 to Rs 1, 50,000 per annum for the households.
	The families belonging to the OBC categories donot migrate much from the villages, but there are some Adivasi families who have youths migrating to neighbouring town in search of stable employment.
Maps	 Appendix-1 gives the following maps, based on PRA exercise: Village Map Village Social Map (with the names and particulars of members in PRA) Village Resource Map

3. Livelihood opportunity analysis

PRA Exercise	Team from CML Guwahati carried out PRA exercise in Kakojan Gaon village as follows:
	 Date: 14-06-2016 Location Kakojan
	• Numbers Present: 39 In Presence of: JFMC office bearers, Village Headman, community members,
	Forest Department personnel, etc.
Objective of PRA	The specific objectives of the exercise are to:
I NA	a) To understand the livelihood options existing within the region, its prevalence and challenges.
	b) Better understand the credit needs of the poor and their coping mechanism. Examine the options, challenges, and opportunities for financial institutions interested in delivering financial services and
	c) Identify existing livelihood support mechanisms and explore viable options of providing livelihood support services for increasing income and employment opportunities of the people.
Tools Used &	In this study, different tools were used. These includes
Outcomes of	
the PRA	Social Mapping
	Resource Mapping,
	Wealth Ranking,Seasonality of Livelihoods and
	 Venn diagram
Ranking	Ranking exercise has been done for the following:
	Livelihoods & Skills Development
	• Entry Point Activities (EPA)
	Appendix-3 elaborates the above. From the same, it is stated that:
	Ranking of Livelihoods & Skills Development
	1. Agriculture
	2. Livestock
	3. Medicinal Plant
	1

	Rankin	g of EPA						
	Rank	Village EPA as ranked	Details (Appendix-3 has additional particulars)		Probable source of funding/ Department

Agriculture & Horticulture	Table-12 under Record-2 may be seen in this connection for opportunities inthe areas of agriculture and horticulture.							
	 The main constraints are: a) Very negligible use of fertilizers and pesticides, insecticides. b) Lack of irrigation facilities c) Lack of agricultural infrastructure, modern tools and equipment's viz, power tillers, tractors etc. d) Non usages of high yielding seeds etc. 							

	The opportunities are:				
	a) Application of proper and controlled pesticides and insecticides.				
	b) Introduction of new and advance technology				
	c) Well-structured training programme. The villagers are inherited with				
	the skill of cultivation. All they need is improvisation of their skill				
	level.				
	The suggested programmes are:				
	Tractor operation training				
	• Agri - skill development programme.				
	• Training on insecticides, pesticides, hybrid cultivation etc.				
	i international internation of the second state of the second stat				
Livestock	Table-13 furnishes additional information about opportunities for livestock				
	rearing.				
	The main constraints are:				
	a. Unable to buy fodder from market due to poor financial condition.				
	b. Trees fodder n crop residue are available only for 3-6 months. Green				
	fodder is also not available for the whole year.				
	•				
	c. No veterinary care clinic.				
	d. Lack of knowledge about the proper rearing of live stock				
	The opportunities are:				
	a. Higher income from livestock rearing.				
	b. A huge demanded market for milk is available as Tinsukia district head				
	quarter.				
	quarter.				
	The suggested programme is:				
	a. Piggery				
	b. Poultry				
NWFP	The opportunities for NWFP are tabulated at Table-14 under Record-2				
	The main constraints are:				
	a. Less availability of NWFP				
	b. No technical know-how				
	c. No processing units				
	The opportunities is:				
	a. Availability of fertile fallow land				
	The suggested was suggested and				
	The suggested programme are:				
	a. Plantation of Food plants,				
	b. Medicinal Plant etc.				
Specialized	For skills development, the opportunities are tabulated at Table-15 under				
Skills	Record-2				
	The main constraints are:				
	Lack of product diversification				
	Lack of research on product quality				
	• Lack of TQM techniques.				
1	- 4				

	The encertupities are:
	 The opportunities are: Providing good communication facility
	 Training of the skill holder
	C C
	• Financial assistance from govt.
	The suggested programme are:
	Training on Modern Tools and Equipment
	Providing modern technology to the villagers
	• Skill Up gradation & Training on New Product Development and Product Diversification
	• Setting up a raw material bank
	• Providing a bulk buy arrangement of the finished product with institutional buyers.
Credit Facility	Table-16 under Record-2 discusses this aspect.
	The main constraints with the reasons are:
	Financial exclusion
	• Higher rate charged by the private money lender.
	The opportunities are:
	• Setting up modern financial institution
	Adequate awareness.
	The suggested programme is:
	 Setting up modern financial institution in the nearby areas.
Strategic Interventions	Summarizing the suggested programmes at above as strategic interventions for the Livelihood Development Plan:
	• Agriculture & Horticulture: Tractor operation training, Agri-skill development programme ,Training on insecticides, pesticides, hybrid cultivation
	• Livestock: Piggery, Poultry.
	• NWFP: Plantation of Food plants, Medicinal Plant etc.
	• Specialized Skills: Training on Modern Tools and Equipment, Providing modern technology to the villagers, Skill Up gradation & Training on New Product Development and Product Diversification, Setting up a raw material bank, providing a bulk buy arrangement of the finished product with institutional buyers.
	• Credit facility: Setting up modern financial institution in the nearby areas.
Livelihood Opportunity Analysis	Framework of livelihood Opportunity Analysis has been done with the help of the following criteria:
1 1111 y 515	Livelihood assets
	 Livelihood assets Livelihood context
	 Priority ranking on potential livelihood

exercis Fundin JFMC 1. 2. 3. 4.	elihood situation of Kakojan JFMC has been analysed during the PRA e using sustainable livelihood framework of DFDI (Department of g for International Development). The existing livelihood situation of s outlined in terms of – Natural Capital Physical Capital Social Capital Human Capital Financial Capital
	Natural Capital :
	The project area is renowned for its biological diversity. Key natural assets include trees like Holock, Gamari, Titachopa, Nahar, Bonsum, Bogipoma, Bola etc. These high value of trees and their extraction for fuelwood collection, zhum cultivation, timber exploitation (either for local consumption or for sale to urban centers), causes deforestation and it is directly connected to rural livelihood strategies.
	This broad-based dependence on natural resources in the project area, we do not put forward an expectation regarding distinctions in access to natural capital across the populations. There is a need to provide alternative such as LPG connection for cooking etc would provide a lesser dependence in the forest. Other livelihood option to be build up for the same cause to preserve the natural resource in the project area.
2.	Physical Capital :
	Physical capital include the basic infrastructure that people need to make a living, as well as the tools and equipment that they use. For example, transport and communication systems, shelter, water and sanitation systems, and energy.
	When we observe the availability of physical capital in the project area, the situation is very poor. There is no good roads, transport and communication systems is very week, water and sanitation systems are not adequate and access to electricity is nil.
	In order to improve the livelihood of the project area, emphasis should be given to improve the physical structure of the JFMC area by providing road, water and sanitation facilities and solar lights alternative to electricity.
3.	Social Capital :
	Social capital has been used to explain the improved performance of diverse groups, the growth of entrepreneurial firms, superior managerial performance, enhanced supply chain relations, the value derived from strategic alliances, and the evolution of communities.

In the project area, only limited number of SHG groups are available. In this case, there is a need to strengthen the SHGs and build up village communities and cooperative societies for better performance of the livelihood opportunities in the area.

It is also seen that the delivery of government schemes to the people is very less. Social schemes are yet to be received in the area.

4. Human Capital :

In the project area, as far as human capital is concern, the people are traditionally skills in the farming sector. All the household reported to be farmer in nature and do subsistence agriculture for self-sufficiency. The farmers focus on growing enough food to feed themselves and their families. The output is mostly for local requirements with little or no surplus for trade.

Although it is also seen from the survey that there is an immense potentiality of sericulture, weaving and cane and bamboo industry in the area.

In the project area, it is seen that majority of the households having land holding from 2-10 hector. It is found that the relationship between land holding and livelihood strategies that larger landholding did not imply higher income after a particular class or stage. Having higher land holdings did not suggest a greater dependence on land in terms of higher agricultural income (in cash or food) from their lands.

This suggest need for building skills like cane and bamboo, tailoring and other non-farm based activities so as to enable household to diversify their basket of livelihood option.

Sustainable livelihood is the capability of people to make their living comfortable and improve their quality of life without endangering the livelihood options of others and education plays an important role to achieve this. The provision of educational opportunities to all people must be facilitate to alleviate poverty and social empowerment.

In the project area, it is seen that there is no facility to attain higher education. There is a need to provide both formal and informal education in the area to equip vulnerable with entrepreneurial and related functional literacy skills.

Source of information always a factor for successful society. Perhaps the reason for backward in the forest area is the lack of access to information. There is no such medium (only radio) available in the project area. There is also negligence of forest offices to provide information to the people. Source of information became an important factor so that people may became upto date to compete with modern society with a better livelihood opportunities gathered from various source.

	 Percentage involvement of income group in a particular livelihood activities
Livelihood Context	 Livelihood activities of the Kakojan JFMC are identifies on the basis of following criteria: Contribution of particular livelihood activity in the total income of the JFMC
	In this case there is a need to improve the Economic & Financia Capital in the area by providing bank accounts, health insurance, crop insurance, bank loans, availing micro finance in order to improve the livelihood scenario of the area.
	In the project area, it is seen that only limited number of people (2 percent of the total households) having their bank accounts. Othe facilities like having health insurance, crop insurance, bank loans availing micro finance is nil.
	Economic & Financial Capital indicates the capital base (cash credit/debt, savings, and other economic assets, including basic infrastructure, production equipment and technologies) which are essential for the pursuit of any livelihood strategies.
	 civilisation. The project area is highly cultured and their traditional way of living brought immense potentially of tourism in the area. In the project area, males are largely engaged in farm activities such as land preparation, sowing, weeding, inter culture and harvesting. Where females are involve in cooking, child care, livestock rearing etc. It is important to analyse gender participation to see how value addition car be provided based on their skills which they perform in day to day life. Migration is one of the important factor in analysing human capital Out-migration or in-migration is take place due to available opportunities for better livelihood. In the project area there is no such out-migration or in-migration factor. Higher education plays at important role in the migration factor. Higher education level increases the migration because people willing to go outside for better livelihood option. The family size also limited.in this certain case migration from other place to another is seen negligible in the project area. 5. Financial Capital :

4. Livelihood Development Plan (LDP)

Income	The main income generating activities as planned at the village are:						
Generating							
Activities	Farm Sector :						
	1.poultry and piggeryPaddy cultivation						
	Non-Farm sector:						
	Driving						
	• Food processing.						
SHG	SHGs of the village can plan the following activities:						
Activities							
	 To create awareness. To organise and form group 						
	3. To involve the villagers in Livelihood Activities collectively.						
Exposure	The following exposure trips are planned:						
Trips							
	1. Exposure to Agriculture University						
	1. Exposure to rightentate empersity						
Summary of	As attached in next page.						
Action Plan	F - 0						
Convorgonao	The planned initiatives may be converged with the following schemes of the						
Convergence	Government of India:						
	a) National Rural Employment Guarantee Scheme - for rural employment						
	b) Rashtriya Krishi Vikas Yojana (RKVY) - for agricultural and allied						
	development						
	c) Rashtriya Krishi Sinchay Yojana (RKSY) - for irrigation, including						
	watershed development						
	d) National Rural Livelihoods Mission						
	e) Skills Development schemes						
	f) Other schemes for rural development and livelihoods as found						
	appropriate.						
	The above convergence will yield synergies for the present plan, as well as help in sustaining the planned works in the post-project period.

		upport for Access to	Market		
	D1	Linkage with institutional buyers and/or govt. Organizations. (throughout the year)	2	Creating platform for buyers' and sellers' interactions (2 day)	80,000.00
	D2	Setting Up Ban Bazar	Throughout the year	linkage through van bazar	1,00,000.00
	D3	Exhibition Participation	1	Participation in one exhibition through forest department	1,20,000.00
	D4	Access To Other Geographical Markets	1	Exposure visit	1,20,000.00
	D5	Publicity through E-portal, brochure, catalogue etc	1	2 day training and awareness programme taken by marketing expert	60,000.00
		Total			4,80,000.00
		Grand Total			15,50,000.00
Convergence		 lanned initiatives ma rnment of India:	y be converge	l ed with the following	schemes of th
	a. b.	-	kas Yojana (l	ntee Scheme - for run RKVY) - for agricul	
	c.	Rashtriya Krishi Sir watershed developm	• •	(RKSY) - for irrig	ation, includin
	d.	National Rural Livel			

e. Skills Development schemes				
f. Other schemes for rural development and livelihoods as found appropriate.				
g. MGNREGA/Job Card related works with DRDA				
The above convergence will yield synergies for the present plan, as well as help in sustaining the planned works in the post-project period.				

6. Forest Development Plan (FDP)

This Forest Development Plan has been prepared after a detailed PRA exercise at the village level as a part of the Micro-Plan of Kakojan JFMC. The objective of this plan is to provide for the sustenance of the conservation and bio-diversity values, environmental functions and productive potential of the forests assigned to the JFMC; while meeting the consumption and livelihood needs of the community in a sustainable manner.

1. Status of the JFMC Forests

The micro-plan takes into consideration the following categories of the JFM Forests of the Kakojan JFMC:

- (a) Forest areas assigned to the JFMC by the Forest Department; and
- (b) Areas planted / to be planted on community lands and other lands outside the notified forest area.

The status of both the above categories of JFMC forests is briefly discussed below.

1.1. Forests & Their Conditions

The details of the status of forest areas assigned to the JFMC have been furnished at Table-3.1 under Proforma-3 ('Forest Development Plan'), which has been attached as Annexure to this micro-plan. After considering other areas planted (or to be planted), the conditions of the forests of the Kakojan JFMC have been summarized below.

Identification	Area of JFMC Forest (Ha)	Distance from Village (Km)	Condition of Forest [Good - Forest with crown density of 40% of more Else 'Degraded']	Frequency of Use by Community [2-3 m / 3-6 m / 6- 9 m / Over 9 m]
(A) Assigned Forest				
Along the periphery Area	30 Ha	0Km	Good Area: - 16Ha Degraded Area: 5 Ha	2-3m
(B) Other Planted Area				
To be allotted as per senction amount in due course of time	632Hact. (NR474hact. IP-158)		Good Area: - Nil Degraded Area: Nil	
TOTAL				

Table-1: Conditions of the Forests of Kakojan JFMC

Source: Proforma-3, Table 3.1 / Discussions with Forest Department personnel & Community members

It is seen that the Kakojan JFMC has 210 Ha under its forests, of which 160 Ha is 'Good' and 50 Ha is 'Degraded'.

1.2. Forest Soil Type

The forests of Kakojan JFMC are located in loamy type(s) of soil. Some salient points of the forest soil type have been given in the following table.

Parameter	Status in Assigned Forests	Status Areas	in	Other	Planted
Fertility Level	2.3 to 2.94% organic. The available N, P205 and K20 content of the Soil is comparatively less.			-	
Soil Erosion Status	-			-	
Presence of:					
(a) Silt	24%			-	
(b) Mud-flat	31%			-	
(c) Newly accreted land	Low			-	
(d) Sand dune	45%			-	

Table-2: Forest Soil Type in Kakojan JFMC

Source: Proforma-3, 'B. Forest Soil Type' / Discussions with Forest Department personnel & Community members.

For the Kakojan JFMC; the salient points of the forest soil type are summarized below:

- 1. Entisol (30.3%)
- 2. Inceptisol (51.3%)
- 3. Alfisols (11.3%)
- 4. Ultisols (7.1%)

1.3. Existing Composition of Flora

In the forests of the Kakojan JFMC, the existing composition of the flora has been given as follows. It may be noted that the local forests are classified as deciduous moist Forests.

Table-3: Existing Composition of Flora in the Kakojan JFMC

Parameter	Local Name(s)	Biological Name(s)
Major Forest Species	Teak	Tectona grandis Linn
Associates	Gamari	Gmelina Arborea
Shrubs	Dhekia	Ferns
	Bhot jalakia	Capsicum chinense
Medicinal Plants	Arjun,	Terminalia arjuna
	Hilikha	Terminalia Chebula
	Neem	Azadirachta indica
	Amlakhi	Phyllanthus emblica
Produces		
	Jori bet	Calamus erectus
	Jati bet	Calamus tenuis

	Raidang bet	Calamus rotang
	Chuli bet	Calamus
		flagellum
	Lejai bet	Calamus floribundus
Others, if any	Kako Bah	D. hamiltonii
	Pahari Jati Bah	Oxytenthera parvifolia
	Dulu Bah	Schizostachyum dulloa
	Amlakhi	Emblica officinalis
	Halakh	Terminalia myriocarpa
	Hollong	Dipterocarpus
		macrocarpus
	Arjun	Terminalia arjuna
	Agar	Aquillaria agallocha

Source: Proforma-3, 'C. Composition of Existing Fauna & Flora' / Discussions with Forest Department personnel & Community members.

2. Other Inputs for the Forest Development Plan

The following sub-sections discuss the other inputs for the Forest Development Plan of the Kakojan JFMC.

2.1. Past Protection Measures of the JFMC

The measures taken by the Kakojan JFMC for forest protection in the past have been discussed as follows.

- (a) Number of households involved: 183
- (b) Number of people involved: 183 (1 Person Per House hold)
- (c) Summary of the measures: Not available
- (d) Any formal mechanism: Not available

[Source: Proforma-3, 'JFMC Status - viii + ix' / Discussions with Forest Department personnel & JFMC members]

2.2. Domestic Requirements of Forest Produce

The dependency of the local community on forest produce for household requirements is available in the table given at below.

Name of Forest Produce	Average Household Requirement		How met at Present	Source
	Frequency of Requirement	Approx. Qty		
Firewood	Frequent	60-75 kg		Forest
Timber for House	Once in a year	2nos.		Forest
Small timber for Implements	-	-		-
Pole / Bamboo	Once in a month	2-3 bamboo / per month		Forest
Fodder from Forest	Frequent	5-6 kg per day		Forest
NTFP	Frequent	2-3 kg per day		Forest
Other	-	-		-

 Table-4 (A): Domestic Requirement of Forest Produce per Household of the Kakojan

 JFMC

Source: Proforma-3, Table-3.2 / Discussions with Forest Department personnel & Community members

There are 116Nos.households in the Kakojan JFMC. From the above table and this number of households, it is inferred that the total annual requirements of the Kakojan village for forest products for own use is as follows:

Table-4 (B): Total Domestic Requirement of Forest Produce - All Households of the Kakojan JFMC

Name of Forest Produce	Community Requirement (Kg per annum) (*)	Remarks
Firewood	120700	Throughout the year
Timber for House	116 nos.	Dec – Jan
Small Timber for Implements	-	-
Pole / Bamboo	730 bamboo	Dec – Jan
Fodder from Forest	140800	Throughout the year
NTFP	204000	Throughout the year
Other		

Source: Table - 4(A) at above & Total Household Number from Community records

(*) = Approx. Qty. of Average Household Requirement (from Table-4 (A) x 65 Households

2.3. Collection & Marketing of Forest Produce by Villagers

Apart from use in the households, the community dependency on forest produces also includes the collection of such items for sale in local markets. The collection and marketing of forest produce by villagers of Kakojan JFMC is given in the following table.

Table-5 (A): Collection & Marketing of Forest Produce by Villagers of the Kakojan JFMC

Name of Forest	Collection for Marketing			Location of
Produce	Season / Months	No of Households Collecting	Average Qty. Collected (Kg)	Collection
Firewood	Throughout the year	183	4320	Forest
Timber for House	Dec – Jan	183	4 nos.	Forest
Small timber for Implements	-	-	-	-
Bamboo	Dec – Jan	183	16 nos.	Forest
Pole	-			
Fodder from Forest	Throughout the year	183	8 kg per day	Forest
NTFP	Throughout the year	183	9-11 kg per day	Forest
Other	-	-	-	-

Source: Proforma-3, Table-3.3 / Discussions with Forest Department personnel & Community members

In the above connection, the following table gives additional pertinent information.

Table-5 (B): Collection	& Marketing	of Forest	Produce -	Additional	Information [
Kakojan JFMC]					

Name of Forest Produce	Surplus Marketed (Kg)	How marketed	Average Income per HH from sale of Forest Produce
Firewood	117000 kg/year	Local Market	1800-2100/month
Timber for House	-	-	-
Small timber for Implements	-	-	-
Bamboo	22-40 pc/ month	Local Market	800-1250/month
Pole	-	-	-

Fodder from Forest	1200 kg /year	Local Market	900-1400/month
NTFP	-	-	-
Other	-	-	-

Source: Proforma-3, Table-3.4 / Discussions with Forest Department personnel & Community members

2.4. Total Requirements of Forest Produce - Domestic Use & Marketing

The total requirements of forest produce by the community members of the Kakojan JFMC have been summarized below - based on the information in the previous sub-sections.

Refer to: Tables 4 (B) & 5 (B) of this Section, given at the previous pages

3. Forest Protection Issues

3.1. Protection Problems

The protection issues of the forests of Kakojan JFMC have been summarized below.

•	Table-7: Protection	Problems of the	Kakojan JFMC
---	----------------------------	-----------------	--------------

Type of Problem	Relevant (Yes / No)	Significant (Yes / No)
Grazing - Local Animals	Yes	Yes
Grazing - Animals from Other Area	Yes	Yes
Illicit Felling of Timber	No	No
Smuggling of Timber	Yes	Yes
Accidental Fires	Yes	Yes
Encroachment of Forest Lands	Yes	Yes
Incident of Snake bites/life threats/risks while protecting forest	Yes	Yes
Theft of Medicinal Plants	Yes	Yes

Source: Proforma-3, Table-3.5 / Discussions with Forest Department personnel & Community members

Thus, it is seen that the significant forest protection issues facing the above JFMC are: (a)Grazing - Local Animals (b) Grazing - Animals from Other Area

3.2. Reasons for Degradation of the Forest

In the Kakojan JFMC, the reasons for degradation of forest are as follows:

- (a) No Scientific Plan
- (b) Traditional Cultivation of Tribal People
- (c) Extremist problem in hill sides

[Source: Proforma-3, Table-3.6 / Discussions with Forest Department personnel & Community members]

4. Components of the Forest Development Plan

The following sub-sections discuss the main components of the Forest Development Plan of Kakojan JFMC; viz. the plans for Protection, Forest Improvement (Treatment), Nursery Development, Maintenance and Miscellaneous Operations.

4.1. Protection Plan

The Protection Plan given at below, discusses the measures for the protection of the forests of Kakojan JFMC from the issues discussed earlier at Sub-section 3.1

Protection Work [to be filled from Table 3.7 of Proforma-3 as applicable]	Location in Forest Area	QuantificationoftheMeasures[Length, Area,Size etc.]	Timing	Priority[HighMediumLow]
1. Engagement of Watcher	R.F.	3 km	брт-бат	High
2. Informers award	R.F.	3km	Anytime	High
3. Fire Protection	R.F.	3km	Anytime	High

Table-8: Protection Plan of the Kakojan JFMC

Source: Proforma-3, Table-3.7 / Discussions with Forest Department personnel & Community members

Thus, it is seen that the significant protection measures planned to be undertaken in the Kakojan JFMC (with high / medium priority) are as follows:

(a) Fencing

(b) Fire protection

4.2. Types of Operations Proposed

The types of operations proposed for the treatment of degraded areas of the JFMC Forest of Kakojan JFMC are given hereunder.

Treatment	Required (Yes/ No)	Responsibility of JFMC (Yes / No)	Month / Year when can be done	Extent of Area proposed for Treatment (Ha)
Restoration of Degraded Forests	Yes	Yes	June - July	200 Ha

Treatment	Required (Yes/ No)	Responsibility of JFMC (Yes / No)	Month / Year when can be done	Extent of Area proposed for Treatment (Ha)
Protection to Cut Stumps of Trees	Yes	Yes	All the Year	200 Ha
Watershed Treatment	Yes	Yes	All the Year	5 Ha
Water Reservoirs	Yes	Yes	All the Year	5 Ha
Grass and Silvi Pastoral activities	Yes	Yes	All the Year	-
Bamboo culture and earth piling	Yes	Yes	All the Year	R.F
Seed Sowing	Yes	Yes	All the Year	-
Root & Shoot Cutting & Plantation	Yes	Yes	All the Year	-
Cut Back & Coppice Treatment	Yes	Yes	All the Year	-
Stone wall fencing/live Hedge fencing	Yes	Yes	All the Year	200 Ha
Social Fencing	Yes	Yes	All the Year	200 Ha
Other Activities(Protection of Elephants)	Yes	Yes	All the Year	R.F

Source: Proforma-3, Table-3.9 / Discussions with Forest Department personnel & Community members

Thus, it is seen that the following are the treatment operations which have been proposed in the forest area of the Kakojan JFMC:

(a) Seed Sowing

(b) Root & Shoot Cutting & Plantation etc.

4.3. Forest Improvement Plan - Advance Works & Creation

The pertinent details in the above connection have been tabulated as follows.

Table-10: Forest Improvement Planned in the Kakojan JFMC

Treatment	Area in Ha under Plantation Module	Priority for Block Plantation	Species	Spacing (metre x metre)
Assisted Natural Regeneration (with plantation in gap)	45 Ha ANR by APFBC	-	Non Sal NTFP	2/2
Block Planting	-	-	-	-
Sowing of Neem, Amla,	15	-	Medicinal Plants	-

Treatment	Area in Ha under Plantation Module	Priority for Block Plantation	Species	Spacing (metre x metre)
Mahua, Bahera (Medicinal Plants)				
Enrichment Plantation/ Sowing	-	-	-	-
Direct Plantation	-	-	-	-
Other	-	-	-	-
Total Area (in Ha.)	60 Ha	-	-	-

Source: Proforma-3, Table-3.8 / Discussions with Forest Department personnel & Community members

4.4. Forest Improvement - Annual Targets

5. Table-10 (A) and (B): Annual Targets of Forest Improvement in Kakojan JFMC (Year-1 to Year-5) and (Year-6 to Year-10)

The annual targets in the above connection are given below for a ten year period.

Name of Plantation	: Block Plantation of Saal Mixed with Associates
Plantation Period	: 2016-17 to 2025-26 (10 Years)
Plantation Area	: 100 ha
Spacing	: 3m X 3 m-1100 plants per ha
No. of Plants to be Raised	: 110000 (11000 approx. annually)
Number Blocks	: 10 Numbers(10 ha each)
Species	: Saal ; Associates - Gamari, Sissoo, Titasopa, etc.
Rates	: As Approved by APFBCS(to be increased by 20% every two years)

Action Plan for Creation of Plantation		
Financial Year	Activities	Amount
2016-17	Identification of suitable site for regeneration-examine possibilities of natural seed fall-determine intensity and nature of biotic interference-Area Not Less than 100 ha, Demarcation of land during the month of December- January, Partition of land in 4 blocks, Land development, Soil Working @ Rs 1000/ha	100000
2017-18*	Block Plantation 3m x 3m, 1111 plants/ha-during the season of April-June; GPS marking of the area	497000
2019 10*	Block Plantation 3m x 3m, 1111 plants/ha-during the season of April-June; GPS marking of the area	497000
2018-19*	1st Weeding; Replacement of dead/struggling saplings raised in the previous year	61600
2019-20*	Block Plantation 3m x 3m, 1111 plants/ha-during the season of April-June; GPS marking of the area	596400
2019-20*	2nd Weeding; Replacement of dead/struggling saplings raised in the previous year	73920
2020-21*	Block Plantation 3m x 3m, 1111 plants/ha-during the	596400

	season of April-June; GPS marking of the area	
	3rd Weeding	147840
2021-22*	4th Weeding; Replacement of dead/struggling saplings raised in the previous year	266112
2022-13*	5th Weeding; Replacement of dead/struggling saplings raised in the previous year	354816
2023-24*	6th Weeding; Replacement of dead/struggling saplings raised in the previous year	266112
2024-25*	7th Weeding	266112
2025-26*	8th Weeding	266112
	Total Budgetary Requirement	3989424

* Silvicutural thinning to be undertaken on intervals of five years post plantation

Source: Proforma-3, Table-3.10 / Discussions with Forest Department personnel & Community members

Name of Plantation	: Block Plantation of Teak Mixed with Associates, Firewood and Bamboo			
Plantation Period	: 2016-17 to 2025-26 (10 Years)			
Plantation Area	: 100 ha			
Spacing	: 2m X 2 m-2500 plants per ha			
No. of Plants to be Raised : 110000 (11000 approx. annually)				
Number Blocks	: 10 Numbers(10 ha each)

2023-24*	6th Weeding; Replacement of dead/struggling saplings raised in the previous year	116424
2024-25*	7th Weeding	116424
2025-26*	8th Weeding	116424
	Total Budgetary Requirement	2149586

* Silvicutural thinning to be undertaken on intervals of five years post plantation

5.1. Nursery Development Plan

The Nursery Development Plan for the Kakojan JFMC depends on the following types of Nurseries:

- (a) JFMC Nurseries (incl. Departmental Nursery)
- (b) Other Nurseries SHG & Private.

The details are given below.

JFMC Nurseries

The following table gives the details of the nurseries of the Kakojan JFMC. This includes the Departmental Nursery involved in JFMC works.

Table-11 (A): JFMC Nurseries of the Kakojan JFMC

Location of Nursery	Species	Year of Development	Number of Seedlings	Remarks
Kakojan JFMC	Varieties	2016	7,20,000	Proposed

Source: Proforma-3, Table-3.11 / Discussions with Forest Department personnel & Community members

Other Nurseries

The following table gives the details of other nurseries near the Kakojan JFMC.

Table-11 (B): Other Nurseries near the Kakojan JFMC

Name of Nursery	Species	Year of	Number of	Remarks
		Development	Seedlings	
	Varieties	2016	7,20,000	Proposed
Kakojan JFMC				

Source: Proforma-3, Table-3.12 / Discussions with Forest Department personnel & Community members

5.2. Maintenance Plan - 10 Years

The maintenance plan for plantations raised in the Kakojan JFMC is given below. This covers a period of ten years.

(A) Timber Species, Gameri, Tik

Year(s)	Treatment
1 st Year	Periodic weeding and removal of creepers Ring formation
2 nd Year	Removing of all dominating weeds affecting supply of sunlight Gap filling Training the plants for straight pole formation
3 rd Year	Removal of side branches
4 th Year	Pruning the nearby trees
5 th Year	Pruning the nearby trees
6 th Year	Gap plantation
7 th Year	Gap plantation
8 th Year	Gap plantation
9 th Year	Gap plantation
10 th Year	Removal of alternative row of teak

Table-12 (A): Maintenance Plan of Teak Plantation in the Kakojan JFMC

Source: Discussions with Forest Department personnel & Community members

(B) Bamboo

Table-12 (B): Maintenance Plan of Bamboo Plantation in the Kakojan JFMC

Year(s)	Treatment
1 st Year	Weeding and removal of dominating other weeds
	Ring formation around the buses
2 nd Year	Weeding and removal of dominating other weeds
	Ring formation around the buses
3 rd Year	Removal of culms
4 th Year	Removal of culms
5 th Year	Removal of culms and trimming of criss-cross culms
6 th Year	Removal of culms and trimming of criss-cross culms
	Light pruning to improve adequate sunlight and aeration
7 th Year	Removal of culms and trimming of criss-cross culms
	Light pruning to improve adequate sunlight and aeration
8 th Year	Removal of culms and trimming of criss-cross culms
	Light pruning to improve adequate sunlight and aeration
9 th Year	Removal of culms and trimming of criss-cross culms
	Light pruning to improve adequate sunlight and aeration
10 th Year	Removal of culms and trimming of criss-cross culms
	Light pruning to improve adequate sunlight and aeration

5.3. Miscellaneous Operations Plan

The miscellaneous operations planned in the Kakojan JFMC are given below.

Table-13): Miscellaneous Operations in the Kakojan JFMC

Operation	Required (Yes / No)	Responsibility	Month / Year	Area (Ha)
(i)Medical/Health care Camp	Yes	VSS	Feb-Mar	JFMC
(ii)Centre For Non- Formal education	Yes	VSS	Feb-Mar	JFMC
(iii)Promotion of Fuel Saving Devices	Yes	VSS	Feb-Mar	JFMC
(iv)Cattle improvement/health improvements	Yes	VSS	Feb-Mar	JFMC

Source: Proforma-3, Table-3.13 / Discussions with Forest Department personnel & Community members

Marketing Operations

For produce from the Kakojan JFMC, the planned marketing operations are:

- (a) Linkage will be established with traders inside and outside the district
- (b) Selling to the Ban Bazar

(c) Participation in Exhibition

Expected Benefits

This sub-section furnishes the benefits expected from the forests protected by members of the Kakojan JFMC, as well as the sharing mechanism for the usufruct benefits.

5.4. Expected Benefits Related to Wood & Grass

The above has been tabulated below for the Kakojan JFMC. The benefits are expected from the forests protected by its members under this Forest Development Plan.

Item	Month	Year (Indicative)	Quantity
Firewood	12 month		65-75 Kg/month
Timber for House	-	-	-
Small timber for Implements	-	-	-
Bamboo	12 month	32-40 pc/ month	700 -1250 Kg/month
Pole	-	-	-
Fodder from Forest Trees & Grass	12 month	-	1600-2000 Kg/month

Table-14: Expected Benefits from Forests Protected by Members of Kakojan JFMC

5.5. Nursery Development Plan

The Nursery Development Plan for the Kakojan JFMC depends on the following types of Nurseries:

- (c) JFMC Nurseries (incl. Departmental Nursery)
- (d) Other Nurseries SHG & Private.

The details are given below.

JFMC Nurseries

The following table gives the details of the nurseries of the Kakojan JFMC. This includes the Departmental Nursery involved in JFMC works.

Table-11 (A): JFMC Nurseries of the Kakojan JFMC

Location of Nursery	Species	Year of Development	Number of Seedlings	Remarks
Kakojan	Varieties	2016	7,20,000	Proposed

Source: Proforma-3, Table-3.11 / Discussions with Forest Department personnel & Community members

Other Nurseries

The following table gives the details of other nurseries near the Kakojan JFMC.

Table-11 (B): Other Nurseries near the Kakojan JFMC

Name of Nursery	Species		Number of Seedlings	Remarks
Kakojan JFMC	Varieties	2016	7,20,000	Proposed

Source: Proforma-3, Table-3.12 / Discussions with Forest Department personnel & Community members

5.6. Maintenance Plan - 10 Years

The maintenance plan for plantations raised in the Kakojan is given below. This covers a period of ten years.

(E) Timber Species Sal , Gameri, Tik

Table-12 (A): Maintenance Plan of Teak Plantation in the Kakojan JFMC

Year(s)	Treatment
1 st Year	Periodic weeding and removal of creepers Ring formation
2 nd Year	Removing of all dominating weeds affecting supply of sunlight Gap filling Training the plants for straight pole formation
3 rd Year	Removal of side branches
4 th Year	Pruning the nearby trees
5 th Year	Pruning the nearby trees
6 th Year	Gap plantation
7 th Year	Gap plantation
8 th Year	Gap plantation
9 th Year	Gap plantation
10 th Year	Removal of alternative row of teak

5.7. Miscellaneous Operations Plan

The miscellaneous operations planned in the JFMC are give Kakojan below.

 Table-13): Miscellaneous Operations in the Kakojan JFMC

Operation	Required (Yes / No)	Responsibility	Month / Year	Area (Ha)
(i)Medical/Health care Camp	Yes	VSS	Feb-Mar	JFMC
(ii)Centre For Non- Formal education	Yes	VSS	Feb-Mar	JFMC
(iii)Prootion of Fuel Saving Devices	Yes	VSS	Feb-Mar	JFMC
(iv)Cattle improvement/health improvements	Yes	VSS	Feb-Mar	JFMC

Source: Proforma-3, Table-3.13 / Discussions with Forest Department personnel & Community members

Marketing Operations

For produce from the Kakojan JFMC, the planned marketing operations are: (a) Linkage will be established with traders inside and outside the district (b) Selling to the Ban Bazar (c) Participation in Exhibition

Expected Benefits

This sub-section furnishes the benefits expected from the forests protected by members of the Kakojan JFMC, as well as the sharing mechanism for the usufruct benefits.

5.8. Expected Benefits Related to Wood & Grass

The above has been tabulated below for the Kakojan JFMC. The benefits are expected from the forests protected by its members under this Forest Development Plan.

Item	Month	Year (Indicative)	Quantity	
Firewood	12 month		65-75 Kg/month	
Timber for House	-	-	-	
Small timber for Implements	-	-	-	
Bamboo	12 month	32-40 pc/ month	700 -1250 Kg/month	
Pole	-	-	-	
Fodder from Forest Trees &	12 month	-	1600-2000	

Kg/month

Table-14: Expected Benefits from Forests Protected by Members of Kakojan JFMC

5.9 Sharing Mechanisms

Grass

The sharing mechanism for the benefits is indicated below for members of the Kakojan JFMC.

Table-15: Sharing Mechanism for Kakojan JFMC

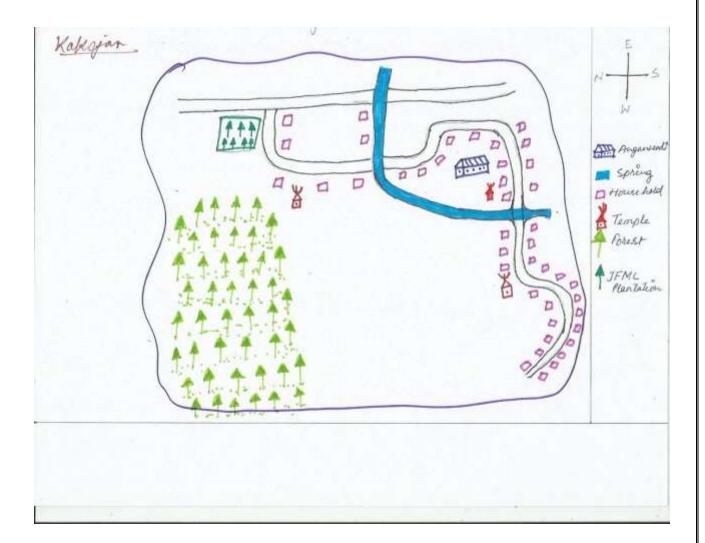

Method	Items
To be shared equally	NTFP, firewood (as revenue sharing)
To be freely collected by the members	Firewood
Other Methods	Processing of NTFPs

Brief about the villages under Kakojan JFMC

Γ	Sl. No.	Name of village	Households (No.)	Population (No.)		
				Total	Male	Female
	1	Kakojan	158	712	368	344

Different PRA tools used under the exercise of PRA technique are:

- a) Focussed Group Discussions
- b) Seasonality Analysis
- c) Social Mapping
- d) Wealth Ranking
- e) Venn Diagram
- f) Chappati Diagram
- g) Priority Ranking EPA and Livelihood

a) Focussed Group Discussion:

The entire FGD were centred on the elements of rural economy namely- primary livelihood options of the JFMC, agriculture, livestock, skill-sets, available support services, infrastructure etc. and also considering the important determinant of the presence of forests area all around. These factors have been blended well before extracting the information out from the respondents.

Findings from FGD

- The existing livelihood options available in the JFMC villages are daily wage labour and a few private jobs. Agriculture is not prevalent in the JFMC, only about 6% of the families cultivate paddy which is mainly rain fed.
- Some of the emerging livelihood options are mid-scale poultry and wage labour in the nearby tea gardens.
- There is no support services available in the field of agriculture.
- The villagers rear cow, duck, local poultry and pig. Almost in 90% of the cases, it is mostly the womenfolk who looks after the reared livestock. However, the villagers face serious challenges like outbreak of diseases, attack of wild animals etc. while rearing livestock.
- There is no support services provided by the Government authorities in ensuring proper rearing of livestock. Even the veterinary sub-centre available in Doomdooma is non-functional.

- Some of the traded where the villagers are skilled at are weaving, masonry, bamboo craft, electrician, plumbing etc. In few of these courses, the villagers have been provided basic training as well under the Forest Department project.
- Some of the Government schemes through which some of the villagers have been benefitted are MGNREGA, IAY, provision of tube-well etc. However, these benefits have covered only 20-30% of the villagers.

b) Seasonality Analysis

Seasonality analysis was done to generate information about and identifying periods of particular stress and vulnerability. In the context of a group discussion with respondents during the PRA, parameters such as expenditure, income, credit and savings were probed in sync with the factors such as employment trend, health conditions, education etc. associated with its increase or decrease in one's households.

Expenditure& Income

Children's education is also a component where most of the households spend during the start of the year. It is especially during the months of January to March when the new academic session of schools begin and apart from admission fees, the people also spend on buying new uniforms, textbooks and stationaries. The community also spends during April as it marks the onset of festival of Bihu. Again, for those engaged in paddy cultivation spends significantly during sowing season starting May till July along with harvest season starting in the months of October till December.

When it comes to income, it is seen that selling of paddy, arecanut and livestock provides a good source of income to the villagers in the months of October and November. Those are engaged as daily wage labour in nearby tea estates earn good amount of income in the months of June and July as these months are considered to be peak season for plucking.

Savings and Credit

It was mostly found that amount of savings increases with the increase in income and most of the dwellers resort to institutional savings with likes of Post Office and bank savings. It is to be noted that the rate of interest for credit varies between group inter-loaning and outside members.

Сгор	Cultivating	Harvesting						
Paddy	May-July	October- December						

Seasonality of Engagement_ Farm Activities

Seasonality of Engagement_ Non-Farm Activities

Engagement	Period of Engagement
Daily Wage Labour	April-August
Masonry	September-March
Petty business	Throughout the year
Mason	August to March
Other Private Service	Throughout the year

C)Social Mapping:

The social mapping activity was carried out to visualise the socio-economic aspects of the household under the JFMC villages. The mapping identified the housing patterns of the households, availability of schools, social infrastructure, religions and beliefs of the communities etc. Prior to social mapping an awareness camp was organised within the villages with an objective to gather villagers for PRA. The villagers were actively participated in the PRA activity. Initially, the people of villagers were asked to draw the main roads of the village and then asked them to locate their houses and locate the important social places and government offices with help of the PRA team members. Two of them voluntarily came out to draw and they were assisted by other villagers and the team members.

	Village	Kakojan

	Primary School	1
	Anganwadi Centre	1
	ME, High School &	

Table-3.1:	Information	about	the	villages
I UDIC JIII	mormanon	about	un	v magos

- Under social mapping study a total of 115 households have been identified. Out Of which only 25 houses are pucca houses (bricked wall)
- Other than the class based division of the households, important places like community hall, primary schools, anganwadi centre and playground, religious institutions etc. were mapped.
- Main sources of water for the villagers are the tube-well which is used by villagers as a source of drinking water and for their day to day use.
- Provision of Education facility up to primary level is satisfactory in the village as there are 4 primary schools in two villages along with Anganwadi centres. However, for ME & High School, the students have to go upto 4-5 kilometers.

a) Seasonal Mapping of livelihood activities:

Seasonal calendars were drawn to generate information about and identifying periods of particular stress and vulnerability. In the context a group discussion with villagers were organised, using stones or seeds, as in a preference-ranking matrix. For instance, simple line graphs were drawn to show seasonal increasing or decreasing trends. Seasonal variables like-rainfall, crop sequences, labour demand, availability of paid employment, out-migration, incidence of human diseases, expenditure levels etc., has been considered. Besides, important periods, such as festivals have also been included.

Findings from Seasonality Analysis: To find out the status of household income, expense, savings and credit, both qualitative and qualitative research tool namely- Seasonality Analysis (SA) was carried out in sync with Focus Group Discussion in the JFMC villages. **Appendix-2** furnishes detailed information of the above.

Key Findings:

The FGD conducted revealed that the major livelihood options available in the JFMC are agriculture, Government and Private Job, weaving, livestock rearing and daily wage labour. One of the recent livelihood options which according to the respondents have emerged in the last 3-4 years has been the engagement of some village youth in owning and running autorickshaws or small-sized commercial transport carrier such as Tata Ace.

Agriculture: Agriculture is the primary occupation of the people in the JFMC and the principle crop cultivated is paddy which is also the staple diet of the people. People also take up seasonal vegetable cultivation in their backyard homestead gardens and the produce is mostly for self-consumption. However, a few families also take to commercial vegetable cultivation. Mostly, people engaged in *Sali* paddy cultivation are busy in the months starting from June until the harvest is done in November-December

Challenges in Agriculture: Agricultural produce to a great extent depend on the type of soil, inputs like- high yield variety seeds and fertilizers, capital investment and also a good linkage with the different schemes of government, institutions etc. But, the study in the area brought into light problems particular to this area and expressed as serious by the villagers engaged in agriculture. Some of the problems expressed by the villagers are as follows:

- The trespassing of elephants in the paddy fields especially during harvest season has been expressed as one of the major problems faced by the farmers. The herd of elephants attack the fields mostly during the peak season because of which many lose their desired harvest.
- Poor irrigation is problem in the area. Recession of ground water level and low retention of rain water are causing water shortage problem for paddy cultivation. The respondents pointed out that the farmers in their own ways have been managing irrigation for their farm lands which is not sufficient in most cases.
- Also, villagers even if they want to take up homestead gardening as a commercial activity, can't take up owing to lack of irrigation facilities.
- The villagers lack the know-how on scientific agricultural technical application for ensuring better agricultural productivity

Livestock Rearing/Holding: Livestock is a key component in the economic growth of the JFMC. Most of the members are involved in rearing of goat, pigs, poultry and cows.

Challenges in livestock rearing:

- The Government veterinary care service in the area does not reach the villagers in most cases. The villagers have to take recourse to private veterinary services which are often costly for them. The veterinary doctors including the Government doctors charge high fees each time they visit. Some of the respondents also expressed that due to poor vet-care service, they have learnt from private clinics how to vaccinate and even provide medication to their livestock. In some of the places where people have started undertaking small scale or mid-scale poultry, lack of technical guidance and medication are acting as a great problem in scaling up the activities.
- Piggery is said to be the most profitable livestock but due to the high intensity in the outbreak of diseases, the villagers find it difficult to rear it on a large-scale. The pigs get sick with the change in season. Most prevalent diseases are swine fever, diarrhoea, and paralysis. Even in case of poultry, prevalence of avian flu is common and the situation becomes such that once the outbreak take its toll, most of the villagers sell their poultry at very lower prices
- *Non-Farm Livelihoods:* The number of available trained or skilled resources has been found to be very less in the JFMC. It was also expressed by some of the villagers that a few of them have also been trained in cane and bamboo craft but have not been able to pursue it as a livelihood option. Villagers are interested in taking up trainings on weaving, embroidery, soft toy making, LMV training and fabric painting

Challenges of Non-farm Activity

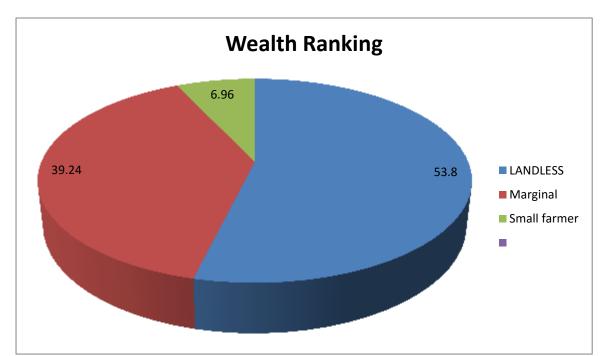

- The villagers engaged with craft and other activities are having low entrepreneurial Spirit. This can be attributed to the fact that, the artisans are having low level of education, lack of exposure and awareness regarding prospect of entrepreneurship income and employment generation.
- Non-availability of tools and machineries is another major impeding factor for the growth of non-farm activity in the JFMC villages.
- Absence of storage facilities of the raw material and finished products.
- Absence of adequate market and marketing channels

Wealth Ranking

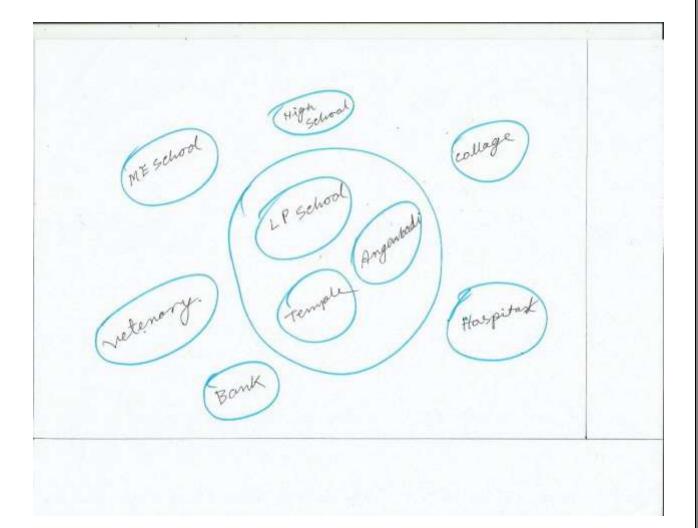

Wealth ranking, or well-being ranking, involves community members identifying well-being. Wealth ranking was done with the help of the following information about the households

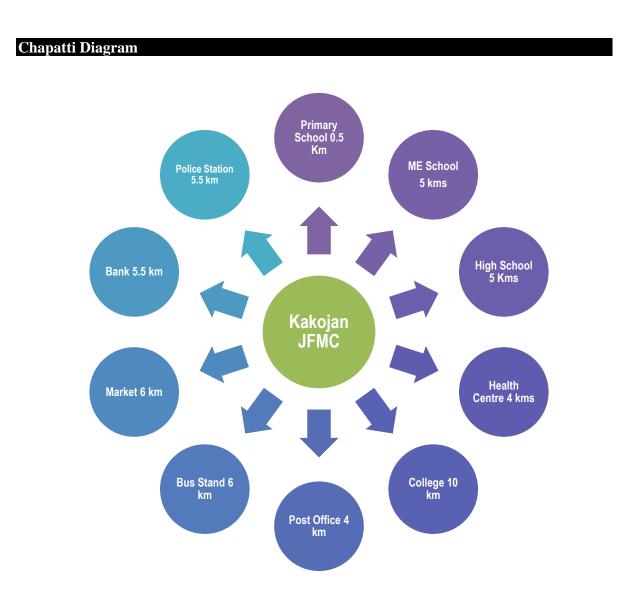

- a) Occupation/livelihood
- b) Land holding
- c) Types of living house
- d) Ownership of assets

As such it is found that about 53.80 % per cent people are poor, about 39.24% per cent are belonging to middle class and about 6.96% per cent are categorized to be rich. Poor people are mainly irregular wage earners and mostly mortgage land for the paddy cultivation. Rich people are mainly involving in tea cultivators and paddy cultivators with good amount of agricultural land. They also have televisions sets, two wheelers, and four wheeler etc. Middle class people are doing cultivation of Tea, horticulture products as well as of paddy with own agriculture and analysing the different wealth groups in a community. It enables evaluators to learn about the socio-economic stratification of project beneficiaries and local people's definitions and indicators of wealth/land along with mortgaged lands.

LIVELIHOOD OPPORTUNITY ANALYSIS

Table -12: Agriculture and Horticulture:

Constraints	Reason	Opportunities	Programme
Low Production/ Collection	 Degraded fertility level of the paddy land due to tea Cultivation Negligible knowledge for organic farming No use of HYV seeds Lack of irrigation facilities Negligible use of modern machineries like tractor, power tiller etc. Not driven by the market demand 	 Use of irrigation facilities, modern machineries which directly lead to increase production Application of HYV (high yielding variety) seeds 	 Training on organic farming Provide training on the application of modern seeds, machineries etc. Provide credit facilities to buy modern machineries.
Storage and Processing	 Lack of common storing place Lack of cold storage facility due to non-availability of electricity 	• Helpful in preserving unsold products for a longer period of time	
Marketing	 Lack of transporting facilities for carrying products Less contact with the direct market; much dependency upon middle man No knowledge on marketing know-how, dependence on traditional system of selling. 	 Smooth transportation facility will help the farmers to carry their products to the nearby markets. Generate highest market price by removing middle men. More knowledge about the current market situation as well as the current value of their products. 	• Buyer seller meet

Table-12: Agriculture and Horticulture

Table- 13: Livestock

Constraints	Reasons	Opportunities	Programme
Less grazing land	Not Applicable		
Availability of fodder	 Unable to buy fodder from market due to poor financial condition Trees fodder n crop residue are available only for 3-6 months. Green fodder is also not available for the whole year. 	 Faster growth of cattle Higher income from livestock rearing 	
Veterinary care facility	 No veterinary care clinic Lack of knowledge about the proper rearing of live stock 	 Disease control Increases the life span of cattle encourage livestock rearing for earning purpose 	
Production of milk	 Less availability of fodder No scientific knowledge about the cattle rearing for increasing milk production 	 High demand for milk products Availability of supplements to cattle like "Milk Booster, Milk Plus" etc. can increase the production of milk in the area. 	
Milk market	 Less contact with the direct market for milk Unaware of the market demand of different milk made products. 	• A huge demanded market for milk is available as Kokrajhar district head quarter and West Bengal state is too far from the JFMC.	

Table -14: NWFP

Constraints	Reasons	Opportunities	Programme
Less collection	Less availability of NWFP	• Availability of fertile fallow land	Plantation of Food plans, Medicinal Plant etc.
Unsustainable extraction	• NA	• Availability of fertile fallow land	
Low rates	• NA		
Value addition	 No processing units Non availability of required resources No technical know-how 		

Table-15: Specialized Skills

Constraints	Reasons	Opportunities	Programme
Raw material availability	 Non-Availability of Raw Materials within reachable location No Storage 	 Common place for setting a raw material storage Strengthen the commercialisation 	• Setting up raw material bank
Product quality	 Lack of research on product quality Shortage of high quality materials Depend on traditional machineries. No use of modern machinery and equipment Lack of TQM techniques. Lack of innovation in product development 	 Increase productivity Optimal use of manpower Use of modern machinery and equipment Improvement of quality and designs by comparing their products with those of others' artisans in the fairs/seminars/ expos 	 Training on Modern Tools and Equipment. Providing modern technology to the villagers
Marketing potential	 No proper market for hand made products No pricing policy No direct contact with the institutional buyers 	 Better price for the products Expansion of market 	 Establish link between buyers and sellers Marketing provision for participation in national and

			 international seminars/expos Intervention in the form of engagement of market consultant Introduction of product catalogues
Credit facilities	 No linkage with the banks or post office saving banks Unaware of the development schemes of banks and government 		Microfinance, Term Loans, Working Capital Arrangement
Product Diversification	 No Product Diversification or New Product Development. Lack of concept for product diversification. 	• Developing Demand Based Products, as per the needs of the modern day market.	 Skill Up gradation & Training on New Product Development and Product Diversification

16. Credit Facility

~

Constraints	Reason	Opportunities	Programme
Indebtness	Nil	• Setting up modern financial institution in the nearby areas.	
Rate of interest	• Higher lending rates charged by the private money lender	Subsidised credit arrangement	
Availability of loan	 Fear of risk taking No knowledge of documentation 	Start-ups entrepreneurial venture	 Microfinance, Term Loans, Working Capital Arrangement
Mortgage difficulty	Unavailability of proper documentation of mortgaged property.	Proper awareness about documentation in the area
